&nbsp;

**PENNY, JRT, Female, (spayed), 19/07/97**  
**West Street, Haslemere, Surrey, GU27 2AB**

**History ;**

**07/10/05; Presented 8/10 lame on right hind, diagnosed in June as probable partial cruciate, settled down without treatment. Now complete rupture, surgery booked for 13/10/05.**

**13/10/05 ; General anaesthesia, repair of ruptured cruciate ligament right stifle using CCL system, and joint imbrication. Home with Rimadyl (carprophen) 20mg ½ twice daily.**

DATE	SESSION NUMBER	SPEED k/h	DURATION	NOTES
20/10/05	1	1.6	5	Post-operative check, dog remarkably well, weight bearing , owner stopped analgesics as dog trying to over-use leg! Weight bearing about 85%. Left thigh = 24.0 cm Right thigh = 21.5 cm
22/10/05	2	1.6	7	Very slight lameness after exercise and getting excited! Still doing fantastically well.

24/10/05	3	1.8 1.6	2 5	Approx 90% weight bearing - fantastic. Owner reported slight lamenes after last session but was fine after rest.
27/10/05	4	1.8 1.6	2 5	

**No further sessions required as Penny has made a remarkable recovery from the surgery, and the work on the treadmill has given her the confidence to use her leg .**
